Colruyt Group heat pump strategy

Natural refrigerants only
HP Nat. Ref. Trends

- Small operational savings
- Competitive investment
- Easier to handle than fossil fuel
- $\text{NH}_3/\text{HC}/\text{CO}_2 = $ zero future hassle
No chemical refrigerants!

Historic mistakes:
1. Ozone depleting HCFC
2. Climate warming HFC
3. TFA accumulating HFO

A few companies make profit and block natural refrigerants

Request:
• Regulate/ban HFO
• F-gas amendment?

>= Heat Pump
Ammonia/HC/CO2

=> ≈ zero emissions
